

PROJECT INDIANA INDUSTRIAL LOFTS

The design uses shifts introduced at various scales: in siting, to avoid a static relationship between the buildings; in plan, to break up each unit's 80'-long volume; in elevation, to orient to specific views. Unit entries are through an open court in the center of the project. This court also provides cross ventilation and additional natural light to the lofts. The lofts fronting indiana street feature direct street access through 8' x 14' doors.

| ADDRESS | UNIT COUNT | DENSITY RATIOS |
|---------------------------|------------|---------------------|
| 1415 INDIANA STREET | LOFT 18 | PROJECT SF 37,809 |
| SAN FRANCISCO, CALIFORNIA | TOTAL 18 | ACRES 0.3 |
| | | UNITS/ACRE 67 |
| STATUS COMPLETED 1999 | | |
| | | PARKING |
| | | TOTAL 18 |
| | | SPACES/UNIT 1 |
| | | TYPE PARTIAL PODIUM |
